

Klika.ph API Integration

User Creation Endpoint — v1

This endpoint lets approved external systems create a Klika.ph user account using the minimum required information. Authentication is performed with an API key issued from the Klika.ph admin panel under **System** → **API Integration**.

Endpoint

Method	POST
URL	https://klika.ph/api/public/v1/users
Content-Type	application/json

Authentication

Every request must include a valid, non-revoked API key. The key must hold the **users:create** scope (granted by default on new keys). Pass the key using either of the following headers:

Authorization: Bearer klk_live_XXXXXXXXXXXXXXXXX

or

X-API-Key: klk_live_XXXXXXXXXXXXXXXXX

Important: The raw key is displayed only once at creation time. Store it in your secret manager. If lost, revoke the key and create a new one.

Request Body

Field	Type	Required	Description
first_name	string	Yes	Given name. 2–50 chars. Letters, spaces, apostrophe and hyphen only.
last_name	string	No	Family name. 1–50 chars. Same character rules as first_name.
email	string	Yes	Valid email address (max 255 chars). Must be unique.
phone	string	Yes	7–20 chars. Digits, +, spaces, dashes, parentheses.
password	string	No	8–128 chars. If omitted, a secure random password is generated; the user ca

Example Request

```
curl -X POST https://klika.ph/api/public/v1/users \
  -H "Authorization: Bearer klk_live_XXXXXXXXXXXXXXXXX" \
  -H "Content-Type: application/json" \
  -d '{
    "first_name": "Juan",
    "last_name": "Dela Cruz",
    "email": "juan@example.com",
    "phone": "+639171234567"
  }'
```

Success Response

201 Created

```
{
  "success": true,
  "user": {
    "id": "8a3f1c5e-1b8c-4f7d-9b3a-2f1d8b4c5e6f",
    "email": "juan@example.com",
    "first_name": "Juan",
    "last_name": "Dela Cruz",
    "phone": "+639171234567",
    "created_at": "2026-05-29T10:15:30.000Z",
    "email_verified": false
  }
}
```

Error Responses

400 invalid_request	Body failed validation. The message field describes the offending field.
401 missing_api_key	No Authorization or X-API-Key header was sent.
401 invalid_api_key	Key not found, revoked, or missing the users:create scope.
409 user_exists	A user with the supplied email already exists.
500 server_error	Unexpected failure on the Klika.ph side.

Example — user already exists:

```
// HTTP/1.1 409 Conflict
{
  "error": "user_exists",
  "message": "A user with this email already exists."
}
```

Notes

- The created user is unverified. They must complete email verification before signing in via the standard Klika.ph login.
- Every call is logged for auditing under the originating API key.
- Rate limits and per-key scopes may be added in future versions; expect new fields in responses to be additive.
